

How important is connectivity to you?

Performance problems? Continuity issues? It's often due to the connection...

Connectivity

The Connectivity discipline within Ictivity deals with **all** parts of network environment which are related to data communication. The focus does not end at layer 3 or 4 of the OSI model, but where interfaces occur with servers, applications or other systems this is taken along. Especially, if there are problems at the LAN/WAN level, we will take a critical look at the network.

Performance

Designing, building and maintaining a LAN/WAN environment is a daily routine for the Connectivity discipline within Ictivity. They adopt the environment of a customer and, at the same time, also have a look at the non connectivity parts. Together follows the road to the solution. Knowledge transfer is obvious and the result of the activity is maximum.

Quality

Connectivity represents the roads of your infrastructure. A bumpy road automatically delays traffic, especially if you expect to see a very nice and smooth driveway. The trick is to know that on the beginning of the driveway, a bumpy road is coming. This is the skill that we at Connectivity discipline are very proud of: quality as a starting point of service. Connectivity determines the basis of your ICT environment, no matter what server you choose.

Brand independent

Ictivity continuously evaluates different manufacturers. This is of utmost importance for the quality of your network. Therefore, we offer you an independent and solid advice for your situation.

Key values

In short, the Connectivity discipline within Ictivity represents the following key values:

- Independent
- Sparring
- Entire OSI model support
- Knowledge transfer
- Co-operation

Ictivity's Connectivity discipline can help in all kinds of issues that concern the network infrastructure. Whether it is about a long-term problem, the design of a new LAN/WAN environment or another issue, Ictivity can certainly play an important role!

Organization

Ictivity is an independent Dutch ICT service Company with offices in Eindhoven, Amsterdam and Rotterdam. Over 100 experienced employees guarantee high quality ICT advice and implementation services aimed at infrastructural solutions. Ictivity is active in the field of consultancy, staffing, training and managed services within the range of government, semi-government and professional businesses. Ictivity mainly works for larger organizations with their own ICT department, both in house and on distance. Ictivity does not sell any hard or software and can therefore guarantee its independence as an ICT service Company.
